```

```
1. หลังจากรันโคัดต่อไปนี้ สิ่งใดจะพิมพ์ไปบน console ?

var x: 5;
const foo: {
    x: 100,
    getX() {
        return this.x;
    }
    };
    const bar: {
        x: 20
    };
    bar.getX: foo.getX;
    console.log(bar.getX());
```

```
3. ผลลัพธ์ของ 10%5 คืออะไร ?

var result = 10%5;
```

```
4. ค่าของ z คืออะไร ?

let p = +"30"+12;
    console.log(p)
    let x = 1 + "2";
    let y = +"30"+0;
    let z = x + y;
    console.log(z);
z=1230
```

```
5. คำสั่งใดมีผลทำให้ตัวแปร result เป็นตัวพิมพ์เล็กทั้งหมด ?

let result = 'Hello World';

result.toLowerCase();
```

```
6. คำสั่งที่ใช้สำหรับการขึ้นบรรทัดใหม่ในสตริง?[TS,JS]

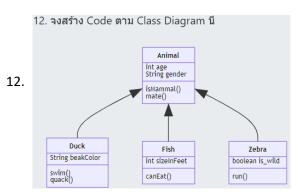

replace(",", "<br />");
```

```

let person: {
    firstName: "Worawut",
    lastName: "Boonton",
    fullName: function() {
       return this.firstName + " " + this.lastN
    }
    };

console.log(person.fullname);
```

```
11. ค่าของ x และ y คืออะไร?
let x,[y,z] = [36,1];
x is undefined.
y is 36.
```

```
class animal {
  public age = 0;
  public gender = ['male', 'female', 'intersex', 'none'];
  isMammal(animalName:string){
    if(animalName=="zebra")
      console.log("Yes,it's Mammal.");
    else
      console.log("No,it isn't Mammal.");
  mate(gender:string){
    if(gender=='male'||gender=='female')
      console.log("Yes,they can mate.");
      console.log("No, they don't have to do that.");
  }
class duck extends animal{
  protected beakcolor = 'Yellow';
  swim(){
    console.log("Yes,duck can swim.");
  quack(){
    console.log("Quack!Quack!Quack");
class fish extends animal{
  sizeInFeet = 18;
  canEat(){
    console.log("Yes,fish is eadible.");
  }
class zebra extends animal{
  is_wild = true;
  run(){
    console.log("Fast as speed boi~~~");
```
